

Minor I Project Proposal

1. Student Information

- Student Name: Koshish Pandey
- Roll Number: 173
- Class / Semester: BCSIT – 2nd Semester
- Subject: Minor I
- Email Address: 2025-bcsit-173@apexcollege.edu.np

2. Project Title

Smart Departmental Store Management Website / Software

3. Project Overview

The Smart Departmental Store Management Website/Software is designed to make shopping easier and faster for customers in departmental stores such as BigMart and other supermarkets. The system will allow customers to browse products, add items to a cart, place orders, and complete payments through cash or online payment methods without needing dedicated staff to handle orders manually.

The software will automatically manage product listings, billing, order records, and receipt generation. Customers can directly use the system for shopping and payment, reducing waiting time and improving store efficiency. The project aims to create a modern, user-friendly, and responsive platform for smart shopping and automated order handling.

4. Objectives of the Project

- To develop a smart departmental store management website/software
- To allow customers to shop products easily through a digital system
- To provide online and cash payment options
- To automatically generate digital receipts after payment
- To reduce dependency on dedicated staff for handling orders
- To improve customer experience and shopping efficiency

5. Type / Theme of Website

E-Commerce / Departmental Store Management System

6. Website / Software Structure (Modules)

- Home Page – Featured products and offers
- Product Page – Product categories and details
- Shopping Cart – Selected products and total bill
- Checkout Page – Payment through cash or online methods
- Receipt Page – Automatic bill/receipt generation
- Admin Dashboard – Manage products, prices, and orders

- Login/Register Page – Customer account management
- Order History Page – View previous orders

7. Technologies to be Used

- Frontend: HTML, CSS, JavaScript
- Backend: PHP / Node.js
- Database: MySQL
- Tools/Editor: Visual Studio Code
- Other: GitHub for version control

8. Wireframe / Design Description

The website/software will have a clean, modern, and easy-to-use interface suitable for all users.

- The Home Page will display featured products, categories, and special offers
- The Product Page will show product images, prices, and descriptions
- Customers can add products to the Shopping Cart and proceed to checkout
- The Checkout Page will support cash payment and online payment methods
- After payment, the system will automatically generate a digital Receipt/Bill
- The Admin Dashboard will help store owners manage products, stock, and customer orders

The design will focus on simple navigation, proper spacing, mobile responsiveness, and fast order processing for a smooth shopping experience.

9. Expected Outcome

- A fully functional departmental store management website/software
- Easy shopping experience for customers
- Automated billing and receipt generation system
- Reduced workload for store staff
- Responsive design for mobile, tablet, and desktop devices
- Improved efficiency in product and order management

10. Challenges (Optional)

- Managing secure online payment integration
- Maintaining accurate product stock and billing records
- Designing a responsive and user-friendly interface
- Ensuring smooth performance during multiple customer orders
